

WZ Reader

Fast and simple PDF — User Guide

v1.3.1

Opening files

Five ways to open a PDF

Click the **Open** button at the top and choose a file.

Press **F2** to bring up the file picker instantly.

Drag and drop a PDF onto the window to open it right away.

Double-click the empty area when no file is open to bring up the picker.

Double-click a PDF in Windows Explorer and WZ Reader opens it automatically. *(installed version only)*

Use **Open ▾** → **Open from URL** and paste a direct link to load a PDF from the web. *(If the site blocks cross-origin access, download the file and open it directly.)*

View modes

Switch the layout to match what you're doing

Single page

Scroll one page at a time, top to bottom. The default view.

Two-page spread

Show two pages side by side — great for reading like a book.

Grid view

See every page at a glance. Click one to jump to it.

Fullscreen

Fill the whole screen — perfect for talks and presentations.

Zoom: Hold **Ctrl** and scroll the mouse wheel to zoom in/out. You can also use the **+** / **-** buttons or the rotate button at the top.

Enter fullscreen: Pick it from the top menu or press **F5**. To start from the page you are on, press **Alt** + **F5**.

Page management

Navigate and edit from the left panel — editing requires Editor mode

Jump to a page

Click a page thumbnail in the left list to jump straight to it.

Reorder

Drag thumbnails up or down to rearrange pages freely.

Add pages

Insert a blank page, or pull in pages from another PDF file.

Delete pages

Select the pages you want to remove and press Delete or the trash button.

Select multiple pages at once: Hold **Ctrl** or **Shift** while clicking to select several pages together.

💡 **No worries:** When you delete or reorder pages, stamps and signatures follow along automatically. Watermarks stay in place too.

Text recognition (OCR)

Read text from scanned or image-only PDFs — Korean & English

When a PDF holds its text as images — so you can't select or search it — running **OCR** recognizes the characters so you can select and copy them. It runs **entirely on your device**, with no extra software and no internet connection.

Current page

Choose **Current page** from the **OCR** menu to quickly recognize just the page you're viewing.

Whole document

Choose **Whole document** to recognize every page in turn. Progress is shown, and you can **cancel** midway.

Select & copy

Once recognition finishes, drag over the text to select and copy it — aligned naturally to the original characters.

Fully offline: Recognition happens entirely on your device. Your document is never sent anywhere.

Already has real text? You can search it directly with **Ctrl** + **F** — no OCR needed. Use OCR for scans and photos where the text is an image.

On phones: Large pages or tight device memory can make recognition slow or stall. For big documents, prefer running OCR on a PC.

Stamps, signatures & watermarks

Marks saved permanently into the PDF — available in Editor mode

Add a stamp

Click the stamp icon, pick a stamp, then click where you want it on the PDF. Size and angle are fully adjustable.

Add a signature

Click the signature icon to open a popup. Draw your signature with the mouse or touch, then place it where you like.

Add a watermark

Lay translucent text across the whole document. Set the text, size, color, and angle — it

applies to every page automatically.

✓ **Delete a mark:** Click a stamp or signature to select it, then press **Delete** or **Backspace**.

💡 **Save to keep it:** These marks are committed to the file only when you **Save as PDF**. See [Exporting](#) below.

On-screen markup

Highlight during talks & lectures — not saved to the file

Tools for drawing temporarily on screen. Handy for pointing out or emphasizing something during a presentation. They're **never saved into the PDF**, so you can wipe them clean anytime.

1 Yellow highlighter

Drag the mouse to draw freely in translucent yellow. Press **1** again to turn it off.

2 Red rectangle

Drag to draw a red outline box — great for framing an area. Press **2** again to turn it off.

Clear everything: Press **ESC** to erase all markup and exit drawing mode. The **Reset** button at the top does the same.

In fullscreen: Press **ESC** once to clear markup, and again to leave fullscreen.

Presenter tools

A set of emphasis tools for fullscreen — built for talks & lectures

Press **F5** to enter **fullscreen** and the presenter tools come alive. Switch tools with a single keystroke to draw on screen, point with a laser, or zoom into a spot. **Everything shows on screen only and is never saved to the PDF.**

P Pen

H Highlighter

R Rectangle

Drag to draw freehand lines.
Great for underlining a key point.

A thick, translucent stroke that highlights over text.

Drag to frame an area with a box.

 **A** **Arrow**

Draw an arrow from start to end to point at a spot.

 **L** **Laser pointer**

A red dot follows your mouse.
Point without leaving any marks.

 **z** **Spotlight zoom**

Magnify around the cursor.
Adjust the level with the mouse wheel.

While a drawing tool is active, change color and width on the fly.

 **1** **5** **Color**

Red · green · blue · yellow · orange for the pen, highlighter, rectangle, and arrow.

 **[** **]** **Width**

[thinner, **]** thicker —
adjust the stroke width in steps.

 **Ctrl** + **Z** · **E**

Ctrl + **Z** undoes the last stroke; **E** erases everything you drew.

 **Press the same key again to turn it off:** e.g. press **P** once more to drop the pen and return to plain viewing.

🔍 **Two-step ESC:** If anything is drawn or a tool is active, one **ESC** clears it all. From a clean state, press **ESC** again to leave fullscreen.

Exporting

Pick a format from the Export menu at the top

Save as PDF

Save a PDF with stamps, signatures, and watermarks baked in. The most common way to save.

Save as HTML

Save a single HTML file that opens anywhere with just a web browser. Handy for sharing without extra software.

Save as Images

Convert each page to a high-resolution PNG and bundle them into a ZIP. Useful when you need to edit or insert images.

Save as Viewer EXE

Save a standalone executable (.exe) with the PDF embedded. The recipient just double-clicks it — the document opens without WZ Reader installed.

Available in the portable build only

Printing

Prints with stamps, signatures, and watermarks included

Click the **Print** button at the top or press Ctrl + P to open the print dialog. What you see on screen is what prints, so check your layout first.
